Wikipedia - Continental drift is the theory that the Earth's continents have moved over geologic time relative to each other, thus appearing to have "drifted" across the ocean bed. The speculation that continents might have 'drifted' was first put forward by Abraham Ortelius in 1596. The concept was independently and more fully developed by Alfred Wegener in 1912, but his theory was rejected by many for ... Sun, 09 Dec 2018 10:00:00 GMT Continental drift - Wikipedia - 1. Rationale. Plate tectonics and magmatism are consequences of heat loss from a planet's interior. Earth was significantly hotter in the distant past and has been cooling for most of its history (Korenaga, 2008, Davies, 2009, Michaut et al., 2009, Ganne and Feng, 2017). The effects of an early hotter Earth on the intensity of mantle convection, volcanism, and volatile element cycling continue ... A force is any push or pull that causes an object to move, stop, or change speed or direction.; The greater the force, the greater the change in motion will be. The more massive an object, the less effect a given force will have on the object.; Unless acted on by a force, objects in motion tend to stay in
