They are most commonly found as small circular, double-stranded DNA molecules in bacteria; however, plasmids are sometimes present in

archaea and eukaryotic organisms. In nature, plasmids often carry genes that may benefit the survival of the organism, for example ... Thu, 06 Dec 2018 14:28:00 GMT Plasmid - Wikipedia - The DNA damage theory of aging proposes that aging is a consequence of unrepaired accumulation of naturally occurring DNA damages. Damage in this context is a DNA alteration that has an abnormal structure. Although both mitochondrial and nuclear DNA damage can contribute to aging, nuclear DNA is the main subject of this analysis. Nuclear DNA damage can contribute to aging either indirectly (by ...
